Learn how to fix Multi-user Access Error (-6098,5) when Opening QuickBooks Files by following the below steps:

1. Verify whether the QuickBooks DBManager service is active. Start the service, if it isn't already.
 - By selecting **Start**, entering **Services.msc**, and then pressing **Enter**, you may check it.
 - The DB Manager(s) will be identified as QuickBooksDB##, where the version number is indicated by the ##.
2. If you encounter an "**Access Denied**" issue or are unable to start the DBManager service (screenshot below). Right-click the DBManager icon to bring up its properties menu, then pick the **Log On** tab to change the logon to the Local System account.

3. Reopen QuickBooks after starting the DBManager service.

Benefits:

Here're the 4 benefits of fixing Multi-user Access Error (-6098,5) when Opening QuickBooks Files:

- **Data integrity:** By resolving the issue, you can protect the accuracy of your financial data and make sure that QuickBooks files open without any problems. This reduces the possibility of data loss or corruption while maintaining the correctness of your information.
- **Time savings:** Fixing the issue gets rid of the necessity for laborious workarounds or troubleshooting efforts. Users can quickly open QuickBooks files, which saves time and improves productivity.
- **Improved reliability:** By fixing the Multi-user Access Error, you make it easier to utilise QuickBooks in a stable and trustworthy environment. As a result, there are fewer unexpected mistakes and disruptions, which makes using the website easier.
- **Seamless collaboration:** By fixing this problem, many users will be able to access QuickBooks files concurrently, facilitating effective teamwork and real-time adjustments. Access limitations are removed, and team output is increased.

Conclusion:

You can enjoy the advantages of seamless collaboration, data integrity, time savings, better dependability, business continuity, and increased user satisfaction by resolving the Multi-user Access Error (-6098,5) in QuickBooks. It enables you to use QuickBooks for your financial management requirements successfully and efficiently.
