We'll lead you through the process in this step-by-step tutorial, ensuring your QuickBooks data is in good shape and your business works smoothly.

Learn how to repair QuickBooks company file through File Doctor tool by following the below solutions:

Solution 1:

Step 1: Shut down QuickBooks.

Step 2: Install QuickBooks Tool Hub latest version (1.5.0.0).

Download the file to a location you prefer (like your Windows desktop or your Downloads folder).

Note: You can find out what version you have, if you have installed Tool Hub. Choose **Home** tab and check version the from bottom.

Step 3: Open the downloaded file (**QuickBooksToolHub.exe**).

Step 4: Install by continuing with the instructions on-screen, then accept the following terms.

Step 5: Click twice on tool hub icon to launch it after the installation is complete.

Solution 2: Run Quick Fix my File

Step 1: In tool hub, select **Company File Issues**.

Step 2: Click on **Quick Fix my File**.

Step 3: Click **OK**, then open **QuickBooks**.

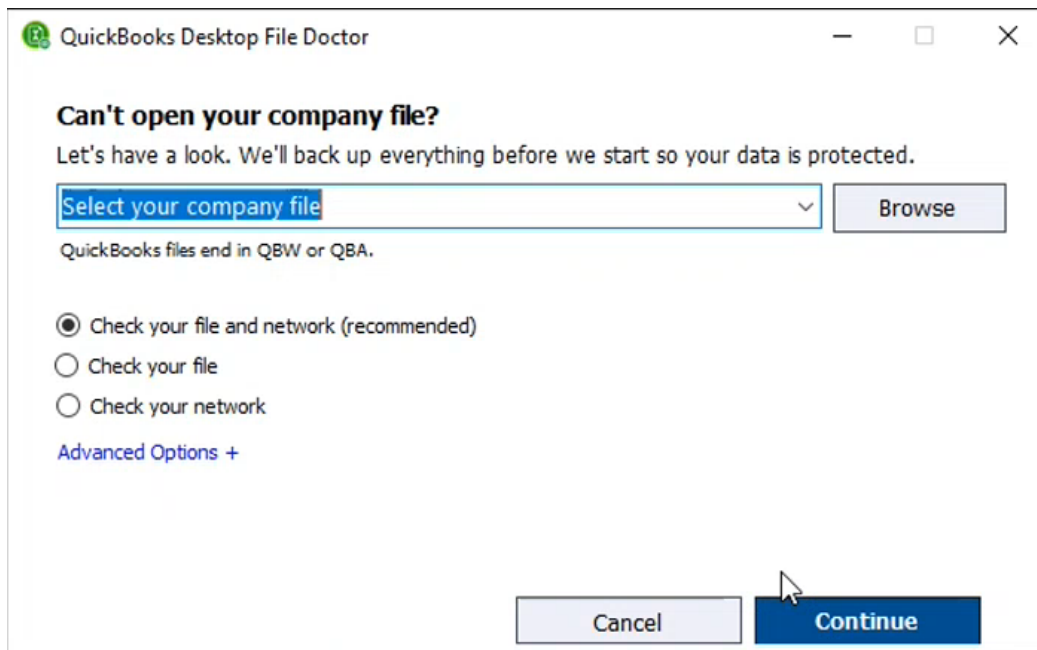

Note: If you still get an error message or can't open your company file, move to Solution 3.

Solution 3: Run QuickBooks File Doctor

1. Go to tool hub, then choose **Company File Issues**.
2. Select the **Run QuickBooks File Doctor** option.

Note: It might take the file doctor up to a minute to open. Look for and manually run QuickBooks Desktop File Doc if the QuickBooks File Doctor won't open.

3. In QuickBooks Desktop File Doctor, **Select your company file** from list of choices. If your file isn't visible, first select **Browse** and then do a search to find it.

4. Select **Check your file** and then click **Continue**.

5. Enter the QuickBooks credentials and then select **Next**.

Note: Your file's size will affect how long it takes to scan. It can take up to five minutes in most circumstances. Upon completion of the scan, launch QuickBooks and company file. Even if the scan solves your issue, it can report that it was unsuccessful.
