

# What to do if the Ace server screen size on Windows is either too large or too small?

**Meta Title:** What to do if the Ace server screen size on Windows is either too large or too small?

**Meta Description:** Troubleshoot Ace server screen size issues on Windows and get solutions for oversized or undersized displays. Optimize your viewing experience now.

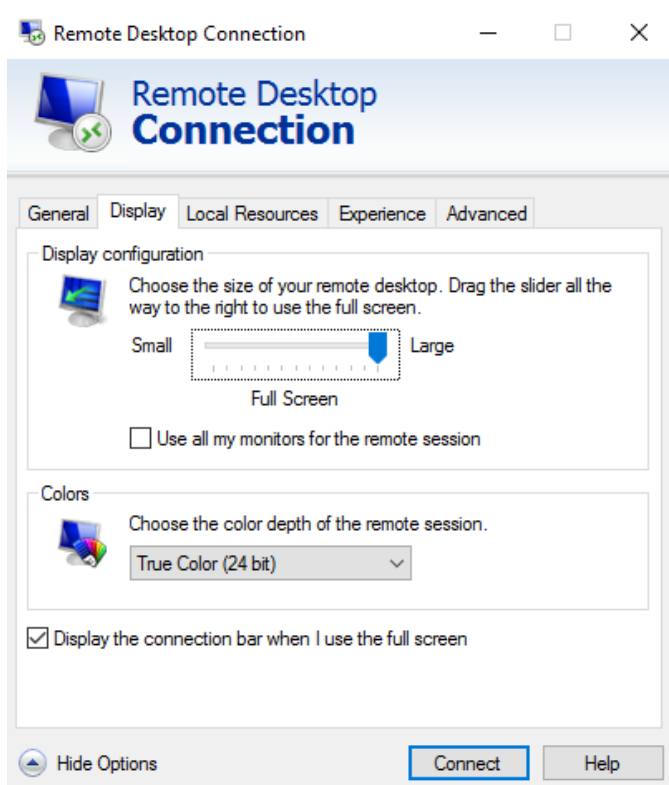

This article will show you how to change the screen size in Remote Desktop settings so that the entire Ace Remote Server window is clearly visible and readable.

Learn what to do if the Ace server screen size is either too large, or too small on Windows computer by following the below steps:

**Step 1:** Right-click the RDP Login icon that you use to connect to the server Ace server.

**Step 2:** Select **Edit**.

**Step 3:** Select the **Display** tab.

**Step 4:** Move the slider to the left one notch under **Display configuration**.

**Step 5:** Click **Save** after choosing the **General** tab, then try connecting again.

### **Benefits:**

Here're the 2 benefits of changing the Ace server screen size when it is either too large, or too small on windows computer:

- **Improved Visibility:** If the Ace server window is too big, shrinking it might make the information more visible by keeping it inside the confines of the screen. It eliminates the need for either horizontal or vertical scrolling, preserving the readability of all the content.
- **Increased Efficiency:** You can multitask successfully by resizing it to a more suitable size and using the available screen space for other work in addition to the Ace server.

### **Conclusion:**

Finding a screen size that balances visibility, usefulness, and personal choice is crucial. You can find the best setup for your unique requirements by experimenting with various sizes.
