

# How to Configure Ace Cloud Server to Prompt Username and Password for Every Login?

**Meta Title:** How to Allow Username and Password Prompt When Logging in to the Ace Cloud Server?

**Meta Description:** Learn how to enable username and password prompt for secure Ace Cloud server login. Step-by-step guide for hassle-free access.

This article explains how to modify your settings so that the Ace Cloud server always requests a password when you log in.

Some users prefer to be prompted for their credentials each time they log in for security reasons. The actions listed below can be used to restore this functionality if you mistakenly clicked "Remember my credentials" when checking in.

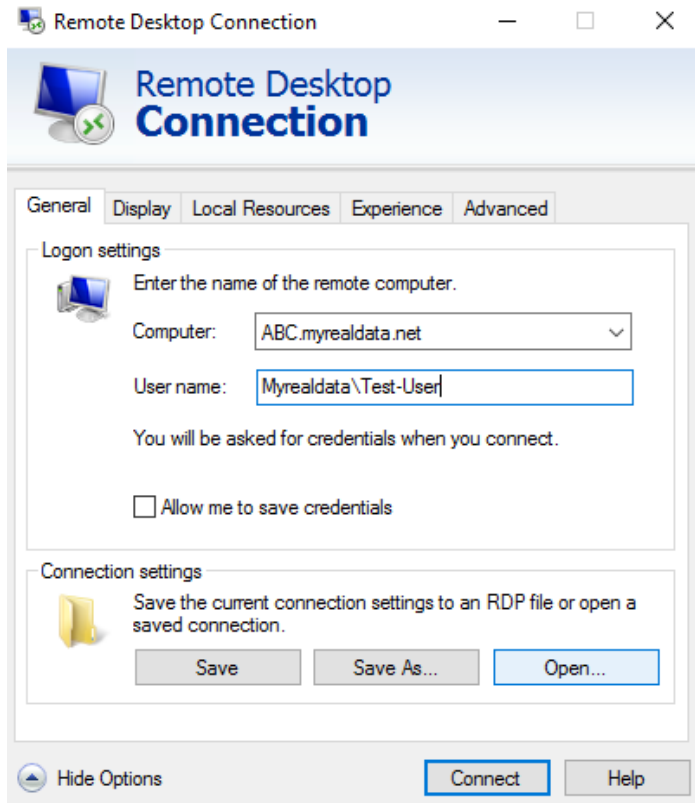

Learn how to allow username and password prompt when logging in to the Ace Cloud server by following the below steps:

**Step 1: Log out** of Ace Cloud server.

**Step 2:** Right click on your RDP login shortcut.

**Step 3:** Click **Edit** and select **General**.

**Step 4:** In the **User name** field, type **myrealdata\<username>**.

Congratulations, you will now always be asked for your login information when accessing the Ace Cloud server.

### Benefits:

Here're the 2 benefits of allowing username and password prompt when logging in to the Ace Cloud server:

- **Security:** The Ace Cloud server and the data saved on it are protected by the requirement of a login and password, which adds another level of protection. The danger of data breaches, illegal alterations, or harmful actions is decreased by imposing authentication since it prevents unauthorized access.
- **User Accountability:** The login and password prompt enable user behavior on the Ace Cloud server to be tracked and held accountable. Because each user has a distinct login, administrators can keep an eye on and assign actions or modifications to users. This promotes compliance, server integrity, and responsible server use.

### Conclusion:

Organizations can create a secure environment, impose access control, monitor user activity, and adhere to industry requirements by permitting a username and password prompt when login into the Ace Cloud server. It offers flexibility and control features for user accounts and a strong authentication system.
