**Meta Title:** How to resolve Microsoft Excel Disk Space Error?

**Meta Description:** Fix Excel memory issue: Unable to open or save files due to low memory or disk space. Resolve Microsoft Excel errors efficiently.

Widely used spreadsheet software like Microsoft Excel enables users to effectively organize and analyze data. While saving files, users might encounter the error "Cannot open or save any more documents because there is not enough available memory or disk space." It is due to not having enough memory or storage space on the machine to accommodate more Excel documents.

Learn how to resolve the above-mentioned error by following the below methods:

## **Method 1 (by file):**

1. Find the file in Windows' File Explorer before attempting to open it in Excel.
2. Select the property with the right click on the file.
3. At the bottom of the **General** tab, select the **Unblock** button.

Windows should keep track of your file unblocking actions, and Excel shouldn't remind you to do it again.

Some file formats offer this option, while others do not. Use Method 2 if your device lacks an Unblock button.

**Method 2 (by folder):** This strategy is preferred if you frequently put all of your downloaded Excel files in a single folder.

1. To access trusted locations in Excel, go to File > Options > Trusted Centre > Trust Centre Settings.
2. Select Add new location, then clicking OK This location's subfolders and the folder where your Excel files are kept are both trusted locations.

Choose **Protected View** under **File> Options> Trust Centre> Trust Centre Settings** (on the left). The next item, "View for files originating from the internet," should be unchecked.

- Enable protected view for documents situated in possibly risky areas.
- Turn on protected view for attachments in Outlook
