

# How to install and manage QuickBooks Web Connector?

**Meta Title:** How to Install and Manage QuickBooks Web Connector?

**Meta Description:** Learn how to efficiently install and manage QuickBooks Web Connector for seamless integration and streamlined financial management.

You can easily set up and administer an app with QuickBooks Web Connector. All of the apps you set up with QuickBooks are displayed in **Connected apps**.

**Note:** You require admin access to the server to complete this process. If in case you don't have access, connect with our support team via call/chat/email so that we can make these changes for you. Submit a ticket by sending us an email at [support@acecloudhosting.com](mailto:support@acecloudhosting.com)

Learn how to install and manage QuickBooks Web Connector by following the below steps:

## Step 1: Download QuickBooks Web Connector

- I. Visit the site and download the installer.
- II. Double-click the installer and select Extract All.
- III. Select the.exe file and then click Run as Administrator from the context menu when it is in the extracted folder.

If you have issues installing a Web Connector, you can uninstall and reinstall it if an error occurs during or after installation by using the below steps:

- I. Press Windows + R.
- II. After typing "control panel" into the Run window, click **OK**.
- III. Select **Uninstall a program**.
- IV. Uninstall Web Connector after making your selection.

## Step 2: Add an app to Web Connector

Ensure that you are logged in as the administrator to both your Intuit account and QuickBooks.

If you have the .qwc file for it, you may connect your third-party online app to QuickBooks.

- i. Navigate to **File > Update Web Service > Manage Web Apps**.

- ii. To customize an app, click **Set up** next to it. Upon clicking this, you will be directed to the app's website where you can log in.
- iii. Click **Connect to QuickBooks** on the program's home page.
- iv. Launch QuickBooks Desktop, then click **Done** on the access confirmation window to complete the setup.

### Manage an app

Make sure you sign into your Intuit Account and QuickBooks as the administrator.

- I. Navigate to **File > App Management > Manage Web Apps**.
- II. To see and edit your connected apps, select **Connected apps**.

### Delete an app

An app can be removed from Web Connector and once you delete the app, QuickBooks Desktop won't support data interchange.

- i. Navigate to **Edit > Preferences > Integrated Applications**.
- ii. Select **Company preferences**.
- iii. Choose the app you wish to uninstall, click **Remove**, and then click **OK**.

### Transfer App to your device

A program can be moved to a different computer for the same corporate file. Once the app has been transferred, the connection from your other PC is lost. Verify the most recent version of QuickBooks Desktop is installed.

- I. Go to **File > Web Service Update > Manage Web Apps**.
- II. Choose **Connected** applications if you want to view and edit your connected apps.
- III. Decide on **Transfer App to My Device**. The app is currently linked to your new device.  
Keep the data transfer going carefully.

### Benefits:

Here're the 2 benefits of installing and managing QuickBooks Web Connector:

- **Seamless Integration:** Integrating external web-based apps, services, or solutions with QuickBooks is simple thanks to the QuickBooks Web Connector. You can create a smooth link

between QuickBooks and various external systems by setting up and maintaining the Web Connector. This connection enhances overall efficiency by streamlining data transfer and getting rid of human data entry.

- **Data Exchange Automation:** The Web Connector streamlines data transfer between QuickBooks and third-party programs. It makes it possible to synchronize financial transactions, client data, inventory data, and other pertinent data points. Data consistency between systems is ensured, human mistakes are reduced, and time is saved by automating data sharing.

### **Conclusion:**

Managing settings and preferences, downloading and installing Web Connector, creating connections with other programs using the proper XML or QWC files, and keeping an eye on integration activities are all part of the installation process.
