

# How to connect to server drive (WebDAV) on a local Windows computer?

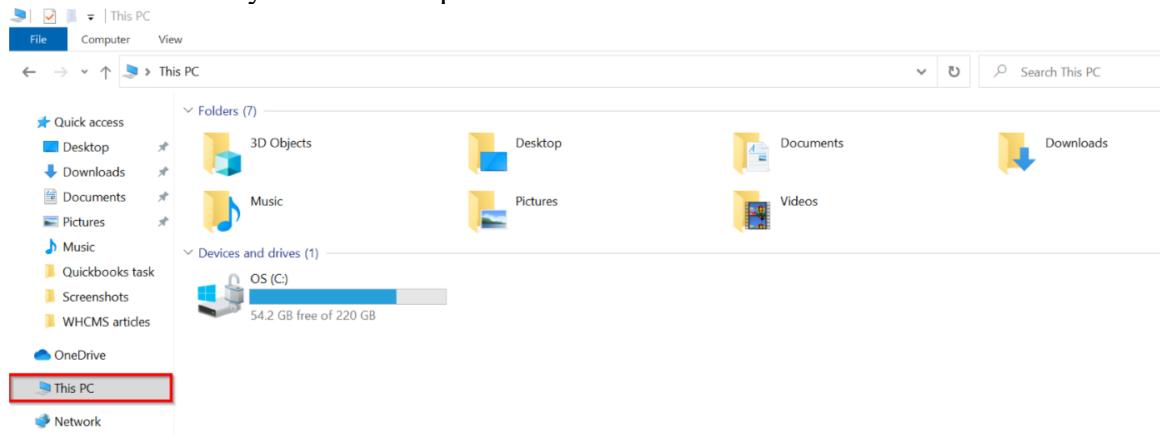

**Meta Title:** How to Connect to Server Drive (WebDav) on a Local Windows Computer?

**Meta Description:** Learn how to connect to a server drive (WebDAV) on your local Windows computer with our step-by-step guide. Access files seamlessly and boost productivity.

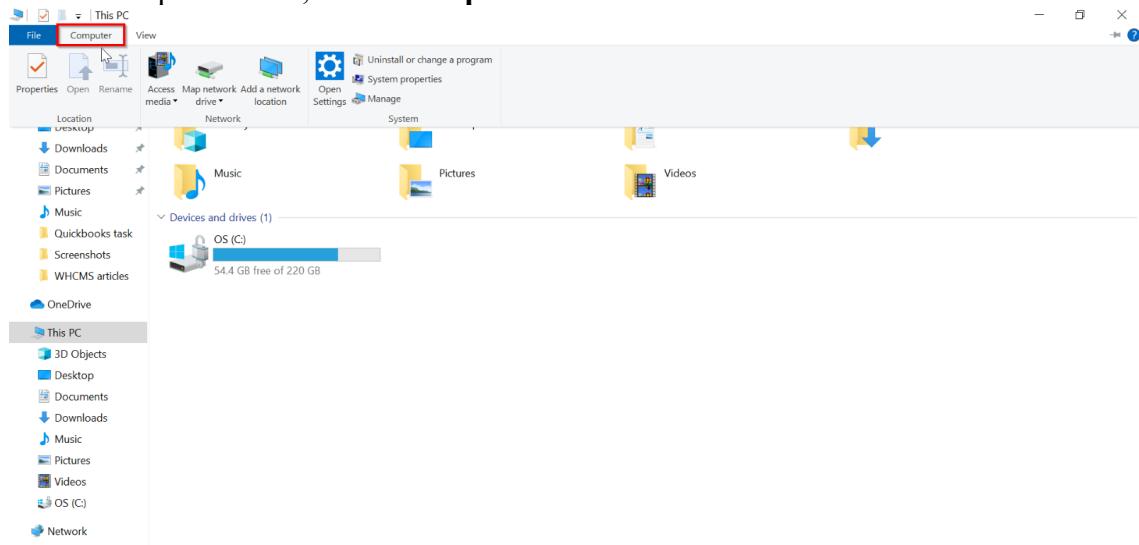

After the Ace support team completes the WebDAV configuration and shares the confirmation with you, follow the steps below to connect to a server drive on your local Windows PC using File Explorer's built-in functionality.

Learn how to connect to a server drive (WebDAV) on your local Windows computer with a simple step-by-step guide:

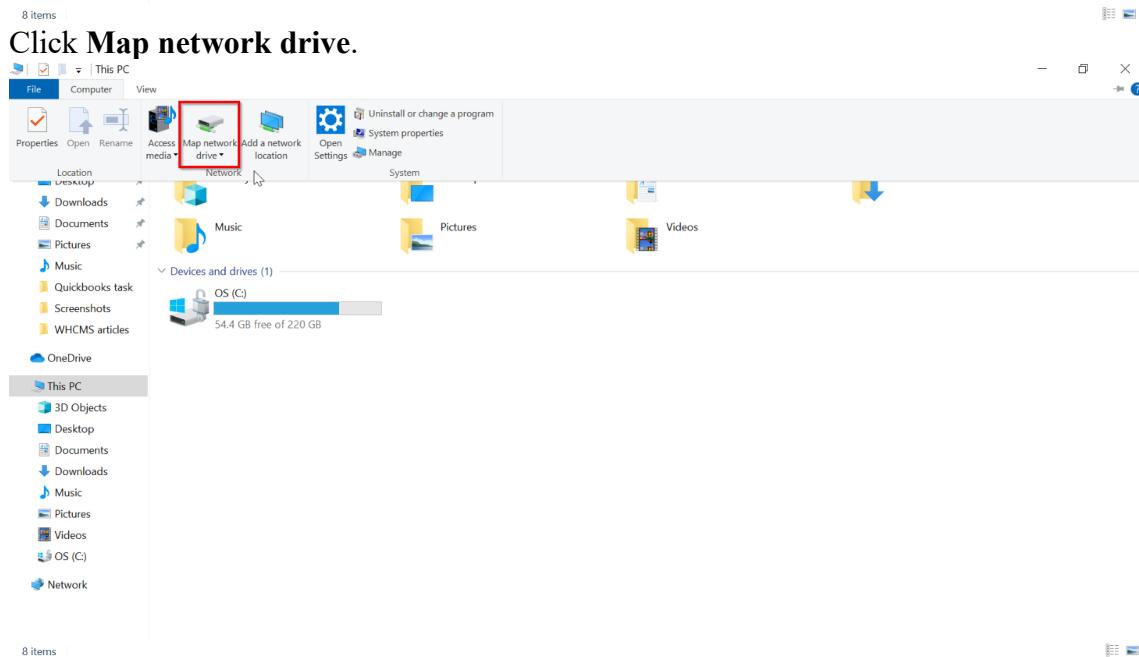

1. Go to **This PC** on your local computer.

2. From the top menu bar, select **Computer**.

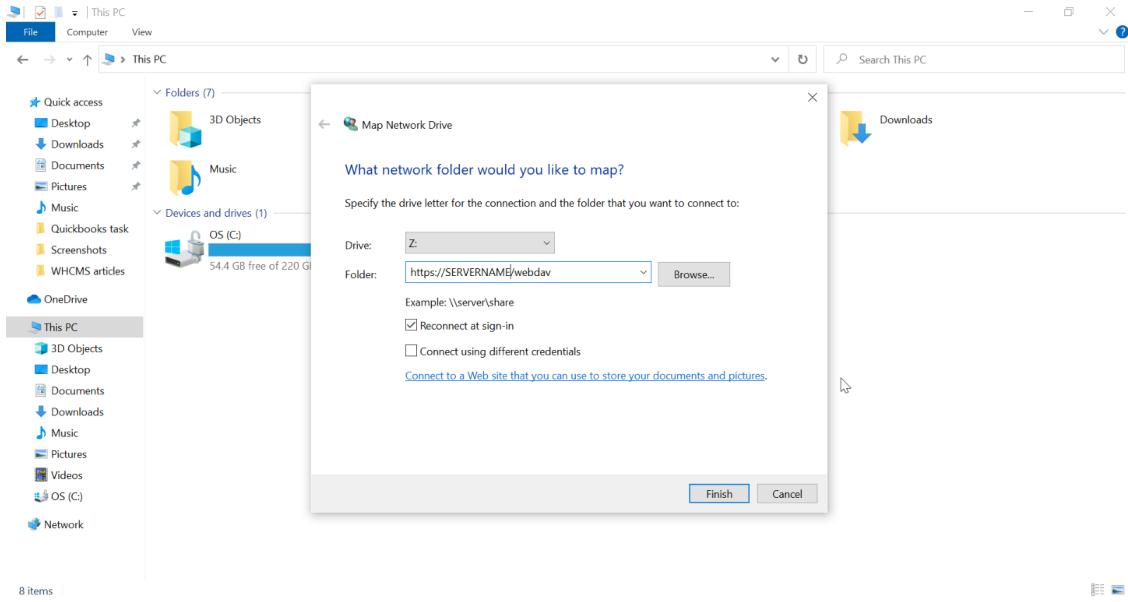

3. Click **Map network drive**.

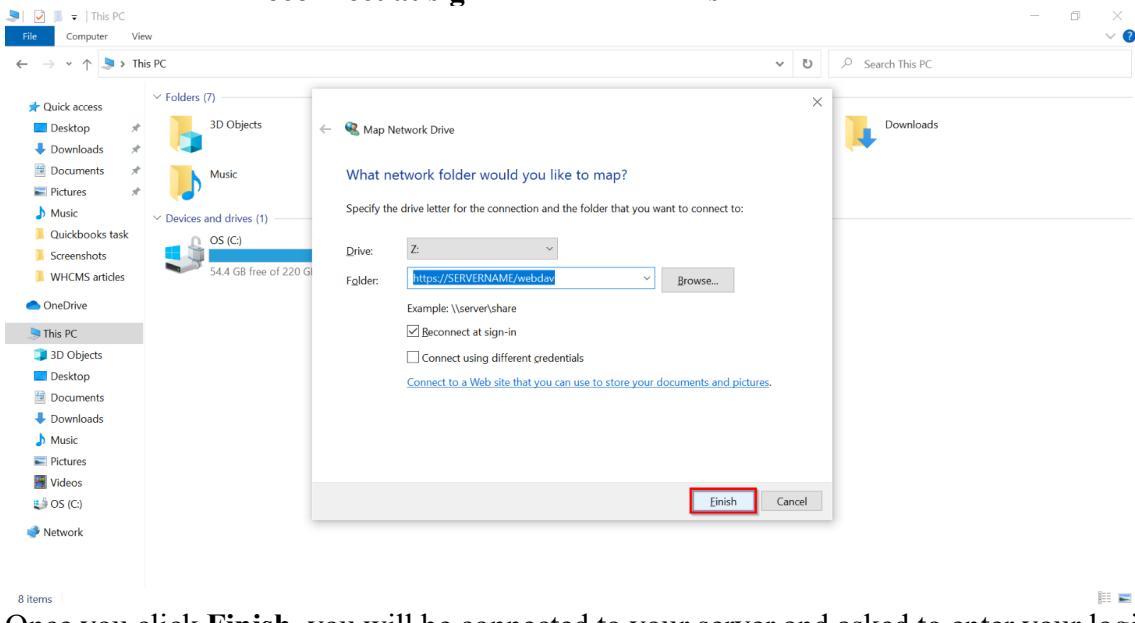

4. Select any drive except the internal drive and paste the server link provided to you in the **Folder** dialog box.

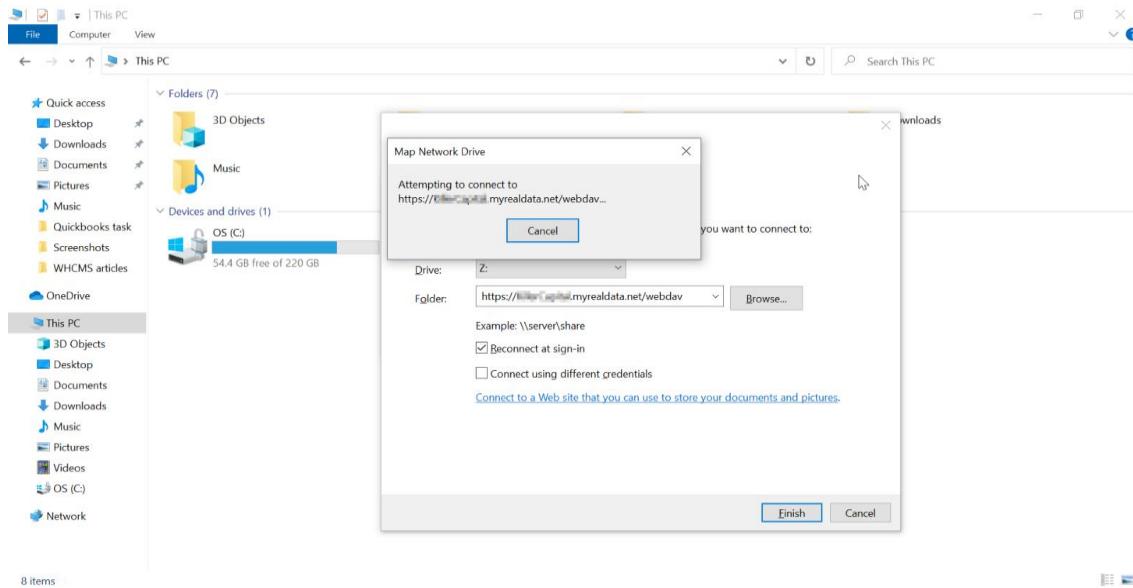

For example: <https://SERVERNAME/webdav>.

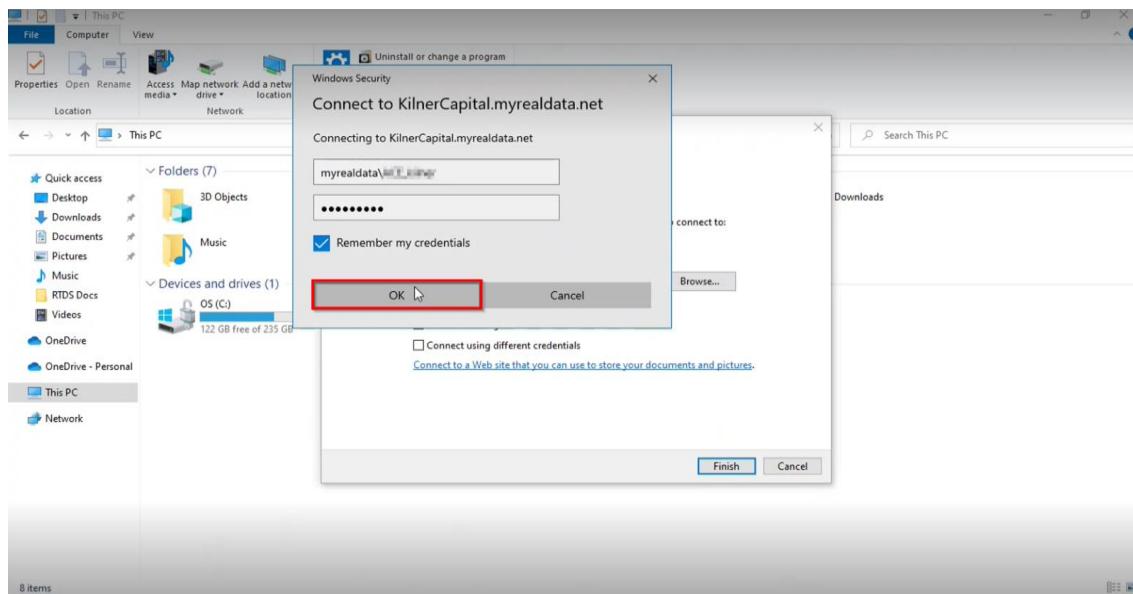

5. Check the box for **Reconnect at sign-in** and click **Finish**.

6. Once you click **Finish**, you will be connected to your server and asked to enter your login credentials to finish WebDAV setup.

**Note:** Make sure to select **Remember my credentials** option.

## Benefits:

Here're the 3 benefits of connecting server drive (WebDAV) on a local Windows computer:

- **Increased Productivity:** Direct access to the server disc enables quicker file retrieval and sharing, reducing the time spent looking for files and boosting productivity overall.
- **Collaboration and File Sharing:** Sharing files and collaborating with others is made simple by connecting to a server disc. The server's simultaneous access and editing by several users promote practical cooperation and simplified file sharing.

- **Remote Access:** WebDAV enables remote access to your data and ensures workplace flexibility by connecting you to the server disc from any location with an internet connection.

### **Conclusion:**

You can benefit from improved file access, collaboration, and data security by connecting to a server disc (WebDAV) from your local computer. This will eventually improve your workflow and productivity.
