How to setup default programs on dedicated servers?
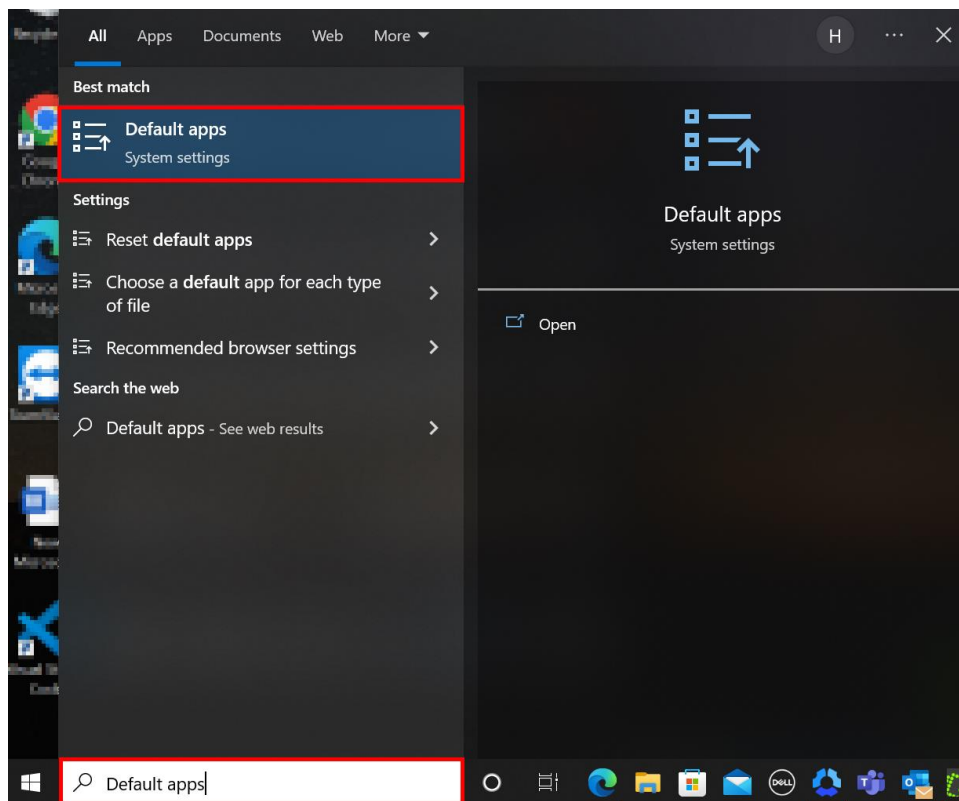

Meta Title: How to Setup Default Programs on dedicated servers?

Meta Description: Learn how to set up default programs on the dedicated server with our step-by-step guide. Customize your software preferences for seamless workflow efficiency.

The purpose of this guide is to help you design a default program for your environment. Windows opens a certain sort of file, such a PDF file, an image, or a webpage, with the default program. For instance, if you have many web browsers installed on your computer, you can choose one of them to be the default browser.
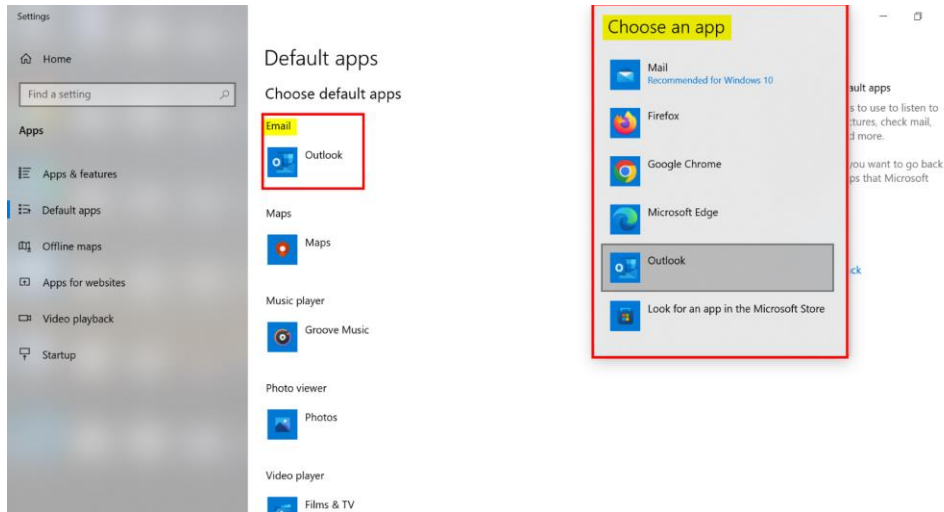

Learn how to setup default programs on the dedicated server by following the below steps:

1. Find and launch the Default programs from the Start menu.

2. Choose any app from the various categories that you want to use. Select this program as the default for each.

Note: You can download new programs from the Microsoft Store, but you must first install them before you can set them as default.

3. In addition to the Microsoft-provided app, you would want your.pdf files, emails, or music to open automatically in the selected program. Scroll down and click **Choose default apps by file type** to access this option.

4. Select the desired app/program for different file types.

Associate file types with specific apps

Name	Default app
.386 Virtual device driver	➕ Choose a default
.3fr 3FR File	🖼️ Photos
.3g2 3G2 File	▶️ Films & TV
.3gp 3GP File	▶️ Films & TV
.3gp2 3GP2 File	▶️ Films & TV
.3gpp 3GPP File	▶️ Films & TV
.3mf 3MF File	🎨 Paint 3D

Note: To set the default programs on the shared server contact us at +1-855-223-4887.

Benefits:

Here're the 3 benefits of setting up default programs on the dedicated server:

- **Streamlined Workflow:** By establishing default programs, you automatically ensure that particular file types are opened with the necessary apps. This saves time and removes the need to manually pick the proper program each time a file is opened, improving workflow efficiency.

- **Personalized User Experience:** Configuring default programs allows users to tailor their server experience. Users can specify their favorite programs for different file kinds, allowing them to adapt the environment to their requirements and tastes.

- **User Consistency:** Configuring default programs on the server increases user consistency. It guarantees that everyone has consistent access to files, enhancing cooperation and reducing compatibility difficulties.

Conclusion:

In conclusion, configuring default programs on the dedicated server provides advantages such as faster workflow, personalized user experiences, higher productivity, improved file management, enhanced compatibility, and user convenience. It encourages efficiency and contributes to creating a coherent and efficient working environment.
