# How to adjust alignment in check printing while printing from UniPrint?

In QuickBooks, while printing a check, there may be an issue with its alignment on the page (check). To resolve this issue, we can realign and scale the vertical and horizontal parameters using the following steps:
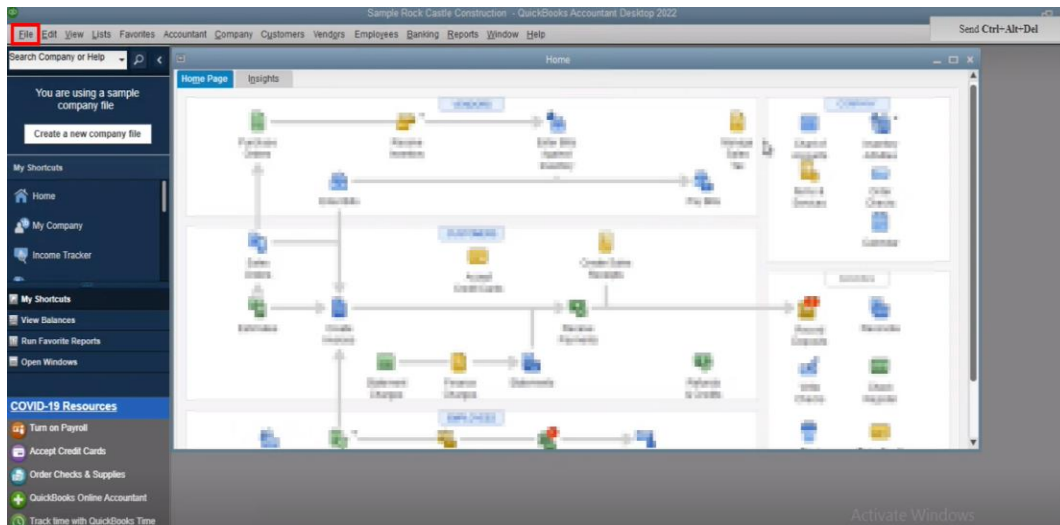

1. Open the QuickBooks application on your system.

2. Click on **Open or restore an existing company** to browse and open your project file**.**

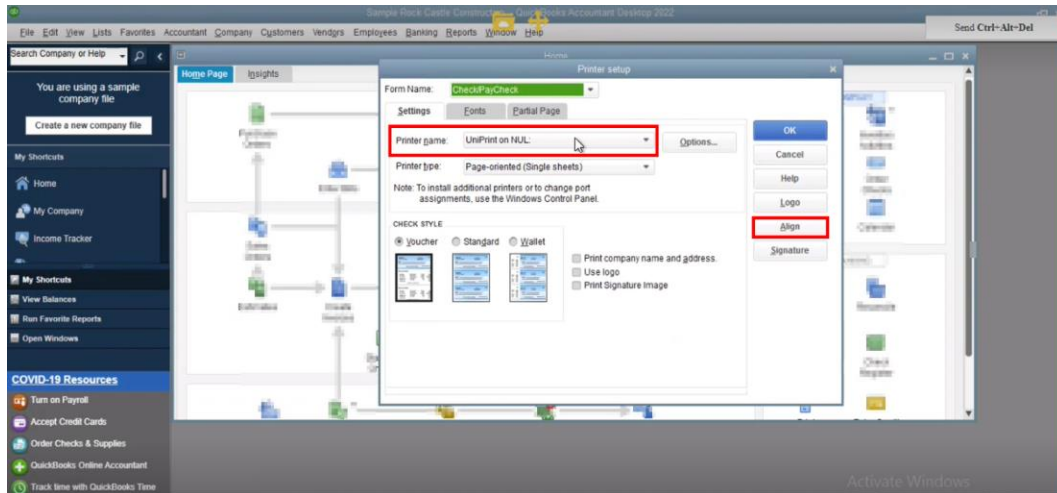

3. Go to the **File** menu on the top left corner.

4. Click on **Printer Setup** and choose the form name as **Check/PayCheck**.

5. Choose the Printer name as **UniPrint on NUL** and click on **Align.**

6. As per the requirement, realign by defining the vertical and horizontal scaling for your check and click **OK**.
